ecurity information				
		it is necessary to implement – and continuously maintain – a holistic, state- the-art industrial security concept. Siemens' products and solutions constitu one element of such a concept. Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Suc systems, machines and components should only be connected to an enterp network or the internet if and to the extent such a connection is necessary a only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place. For additional information on industrial security measures that may be implemented, please visit https://www.siemens.com/industrialsecurity. Siemens' products and solution undergo continuous development to make them more secure. Siemens strot recommends that product updates are applied as soon as they are availabl and that the latest product versions are used. Use of product versions that no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats. To stay informed about product update subscribe to the Siemens Industrial Security RSS Feed under https://www.siemens.com/cert. (V4.6)
